Subject: Re: FYI

Rogers,

The schedule originally attached included all activity through 5/17 and by default included the TXU curve adjustment. It is not jumping out at you probably because we netted the quarter's activity (including Hedge Management items) in with the curve shift items. I don't know how hard it is to break out separately, but if you feel it would add more value please let me know and I'll find out (Neil - can you tell how difficult it would be to show separately curve shift from actual hedge costs?).

With respect to the I-Cap and other retail gen. adjustments, I think these were contemplated in the rough \$50MM depicted on the schedule for Ancillary Charges - East under the outstanding items caption. If you are aware of a different \$50MM item that that might pertain to, please let me know.

The mis-valued options rough estimate of \$20 MM was what Don said Mark Jackson thought his exposure was on options currently booked and just not valued properly. You're right that there are probably a lot of options not even identified that will result out of the data cleanup effort (hopefully some of the \$222MM set aside from the top 13 deal review will cover some of that).

Thanks for your input and I hope the above has clarified some of your concerns. If you think it would be of benefit to sit down and go over the entire list, let me know when you have a few minutes.

Wade

Subject: Re: FYI

Wade -

Some specific items we are currently analyzing that will have an impact on your assumptions:

TXU/North Texas Curve Adjustment

(11.5 MM)

This was put through on 5/17 and I am not sure

made it into your summary.

(20.0 MM)

Narsimha working on currently - will

forward details (I doubt this was planned for)

ECAR Retail Gen Adjustments

NY (Rest Of State I-CAP) Adjust

(07.0 MM)

Use appropriate wholesale curves and

congestion adjustments

(04.0 MM)

Represents just one customer - J. Lewis working

on potential exposure

Illinois PPO

(42.5 MM)

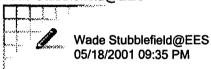

Currently, we are focusing on areas that will allow us to prepare for existing "new deal" flow.

Areas that appear light to me in your analysis include option valuations (this will probably need to be fully resolved through the Contract re-evaluation process) and charges associated with the Illinois PPO roll-off.

Will try to keep you informed of major changes as we address them.

Rogers

Subject: Re: FYI

Rogers/Jay,

Attached is a copy of a reconciliation that Wes C. and John L. had asked for earlier today depicting (1) the makeup of the items included in the YTD DPR loss for WhEES (2) an estimate of the items projected to still hit in Q2 and (3) those items which we think are exposure items but which is doubtful we will have fully resolved during Q2.

Neil H. provided the data for the items included herein, all of which you are hopefully aware of. Given the magnitude of the numbers and this point in the quarter, Wes has asked that we keep the attached updated on at least a weekly basis. Depending on the nature of future items that come up, we may want to convene a periodic meeting to discuss the items herein with all applicable parties.

I apologize for not including you on the distribution earlier today, will make sure you are in the loop with regard to the content of the schedule going forward and will include both of you in all future correspondence.

If you see anything unusual, or know of additional items which should be include, please do not hesitate to contact Neil or I.

Thanks

Wade
